

AP010-A

FOCUS BRIDGE SPEECH TRANSFER SYSTEM

Focus Bridge System

The Focus Bridge Speech Transfer System allows two way clear communication between staff and customers, through any glass security screen or other similar barrier.

Typically used in banks, cash offices, bureaux de change and ticket offices, the AP010 system ensures that each transaction can be conducted clearly, efficiently and without difficulty or delay.

The AP010 provides reliable communication between staff and customers in all types of environments. A range of configurations and accessories provide a solution for all installation requirements.

The integrated microphone in the Focus Bridge picks up the customer's speech and delivers high quality, natural voice reproduction to the staff console unit. Duplex speech technology allows continuous two way communication, without any voice clipping. Optional gooseneck microphones are available for noisy environments.

An induction loop facility is supplied with each system. This enables service providers to comply with the requirements of the Equality Act 2010. This will deliver higher levels of service to wearers of hearing aids fitted with a tele coil, by eliminating all background noise.

AP010-A System Components and Configuration

Each AP010 Focus Bridge Speech Transfer System consists of the following:

- Focus Bridge (Customer Side)
- Staff Console Unit
- Amplifier
- Induction Loop and sticker

The robust construction of the AP010 ensures longevity of service in all environments. Manufactured from steel and powder coated to BS 00A05 leatherette finish.

Simple to use, the Focus Speech Transfer Systems are found in many of the leading bureaux de change kiosks across the United Kingdom.
